

Terraform Documentation

Terraform is an infrastructure as code tool that lets you build, change, and version infrastructure safely and efficiently. This includes low-level components like compute instances, storage, and networking, as well as high-level components like DNS entries and SaaS features.

Use Cases

Popular use cases and related documentation you can use to create Terraform configurations and workflows.

Phases of Terraform adoption

Design your Terraform workflows for scale.

Terraform CLI

Use the Terraform CLI to manage configuration, plugins, infrastructure, and state.

Collaborate

HCP Terraform

HCP Terraform helps teams use Terraform together, with version control, state sharing, governance, and more.

Terraform Enterprise

Terraform Enterprise is a self-hosted instance of HCP Terraform, which is ideal for organizations that have strict security and compliance...

Develop and Share

Plugin Development

Create a provider to allow Terraform to interact with a service.

Modules

Create reusable configurations with modules.

Registry Publishing

Publish a provider or module to the Terraform Registry to make it publicly available.
