

Identity and Access Management documentation

Read product documentation (<https://docs.cloud.google.com/iam/docs/overview>)

Identity and Access Management (IAM) lets you create and manage permissions for Google Cloud resources. IAM unifies access control for Google Cloud services into a single system and presents a consistent set of operations.

[Go to the Identity and Access Management product page for more.](https://cloud.google.com/security/products/iam)

Explore self-paced training, use cases, reference architectures, and code samples with examples of how to use and connect Google Cloud services.

Training

Google Cloud Fundamentals: Core Infrastructure

(/training/course/core-infrastructure)

These lectures, demos, and hands-on labs give you an overview of Google Cloud products and services so that you can learn the value of Google Cloud and how to incorporate cloud-based solutions into your business strategies.

Training

Architecting with Google Cloud: Design and Process

(/training/course/architecting-design-process)

This course features a combination of lectures, design activities, and hands-on labs to show you how to use proven design patterns on Google Cloud to build highly reliable and efficient solutions and operate deployments that are highly available and cost-effective.

Training

Security in Google Cloud

(/training/course/security-in-google-cloud-platform)

In this training course, you will learn about a variety of Google Cloud security controls and techniques. You'll explore the components of Google Cloud and deploy a secure solution on the platform. You'll also learn how to mitigate attacks at several points in a Google Cloud-based infrastructure, including distributed denial-of-service attacks, phishing attacks, and threats involving content classification and use.
